

Theorem 6: Foundation Break-Even Region ($\theta=0.40$ fixed)

Foundation Loss = $\alpha + (1 - \alpha - \theta) \cdot d$ — Loss Across All Megadrop α - d Combinations

Note: Solid black curve marks break-even ($C = 0$). For Megadrop typical ($\alpha = 5-8\%$, $d \approx 44\%$), foundation falls deeply in loss region. Break-even requires $d \leq -14.3\%$ (i.e., 14.3%+ price increase post-listing).
